

If you feed it, Fix it.

You may think you're helping that stray cat by feeding it but... one cat can become 20 in less than a year!

Get it fixed BEFORE you have countless litters to care for.

- A female cat can begin breeding at 4-months old.
- A female cat can go into heat while she is still nursing a litter.
- An unfixed male cat can be responsible for 100s of litters in one year.
- Your unfixed cat is adding to the tragedy of pet overpopulation.
